The New Blackjack "Super Tough" Helmet Torch Holder

No other under brim helmet torch holder in the market today is as strong and as reliable as the Blackjack.

The Blackjack has the superior under brim patented design that securely holds the Torch on the helmet, so the light beam is always positioned where you need it—at eye level. There is no chance of getting snagged, which also makes it ideal for confined space operations.

Traditional Helmet Torch Holders, that protrude above the helmet or fasten to the visor mount, have three things in common: they are flimsy and will either bend or break; they all require the user to tilt their head at odd angles to try and point the light beam at the desired location; and they all have the potential for the user to get snagged by low hanging wires, branches or debris.

The Blackjack Torch Holder is manufactured from Aircraft Grade 6061 Aluminium, (not stamped stainless steel or thermoplastic), so it will be around longer than the helmet it is attached to.

The Blackjack helmet flashlight holder accommodates 4-AA size lights from Pelican, Streamlight, Kohler-Brightstar, and Underwater Kinetics. The Blackjack will also accommodate the new generation of 123 size lithium powered lights from Surefire, and Pelican.

The Blackjack will also Fit most firefighting helmets, both traditional and modern styles.
