NEW Hi Vis Vest Technology

Whether you work with the Emergency Services or Industry, Hi Visibility Vests are an integral part of our day to day operations like gloves and head protection.

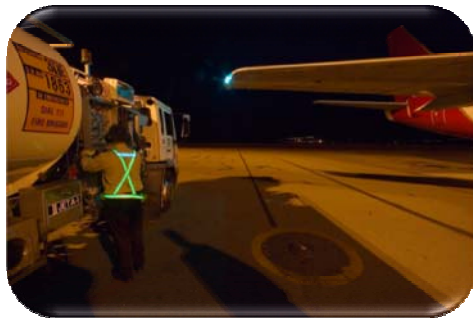

The Exelite Hi Vis Vests take the traditional vest to a whole new level.

Whilst standard Hi Vis Vests are very good, they do have two major setbacks.

1. They are only visible from up to 200 metres
2. Are completely reliant on an external light source to be pointed directly at them.
- 3.

Not only do the Exelite Vests incorporate the same 3M type Hi Vis reflective strips as traditional vests, but in addition, the Exelite uses Electro-luminescent (EL) lamps that are flexible, flat, thin, and are a cold illumination independent light source making the vest visible up to 800 metres without an external light being pointed at them.

So now every individual wearing an Exelite vest is clearly visible no matter where they are.

Exelite is light weight, durable and is available in standard or intrinsically safe versions. It comes in either a vest form or as a harness, which can be worn over the top of existing safety gear. Exelite is ideal for worker safety, and has 12 or 24 hour re-chargeable battery life. Users have three modes, blinking, fast blinking, and continuous. Harnesses are fully adjustable.

Complies to: BS EN 471:2003 - Day / Night Use,
ASNZS4602-1999 - Day / Night Use, TTMC

Available in two options: Harness (pictured right) or Vest (pictured above)
