

Hazchem Spill Kits

Why is a Spill Kit necessary?

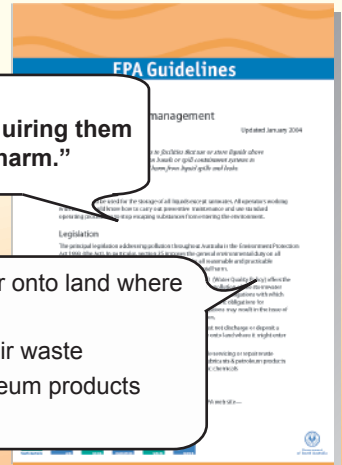

Because, according to the EPA there is a duty of care that falls upon all persons:

While EPA guidelines may vary slightly from State to State, the EPA uniformly: **“imposes a general environmental duty on all persons undertaking an activity that may pollute, requiring them to take all reasonable & practical measures to prevent or minimise any resulting environmental harm.”**

Discharging any of the following pollutants is prohibited:

“a person must not discharge or deposit a pollutant listed in Schedule 4 of the Policy into any waters or onto land where it might enter any waters. The pollutants listed include:

- agricultural chemicals
- engine coolant
- motor vehicle servicing & repair waste
- cleaning agents
- solvents
- oil, grease, lubricants & petroleum products
- detergents & their by-products
- rubbish

What type of products are in the Spill Kits?

Ecospill has specifically designed Hazchem Spill Response Kits suitable for aggressive liquids, most chemicals including alkalis, acids, caustics & corrosives. Each **ecospill** Hazchem Spill Kit contains basic PPE* (Personal Protective Equipment), Spill Clean Up Instructions, as well as:

Absorbent Powder

- ChemSorb - standard spill kits - or -
- SNOW Absorbent - premium range

Absorbent Mats

Thick Yellow Absorbent Mats that absorb most chemicals including alkalis, acids, caustics & corrosives. Ideal for any in-plant application.

Land Socks

1.5m & 3m in length, these socks are placed around the perimeter of the spill, in order to contain it.

** Important Note: When dealing with hazardous chemical spills, always consult that chemical's MSDS in order to ascertain the correct PPE required for your safety. Do not assume that the PPE in your spill kit is sufficient for every conceivable chemical.*

Paint Spill Kit

In a convenient Carry Bag, this Kit is ideal for commercial painters. 20L, 40L

Cat No. HZP20, HZP40

Hazchem Transport Spill Kits
