## POWERFLARE

**The Strongest, most reliable Emergency & Tactical Strobe in the World Today!**

**Here is why.....**

It can withstand being driven over by a tank.

It can (and has been) deliberately thrown from a helicopter at 3000 feet onto a concrete tarmac with no effect. In fact, it is currently in use in Iraq & Afghanistan and is regularly thrown from Helicopters at 800 feet to mark landing zones.

**It can survive being strapped to a briefcase of exploding C4** (Pictured below)

The Powerflare is currently in use by the Australian Defence Force in Afghanistan. (No other portable strobe was capable of doing the job)

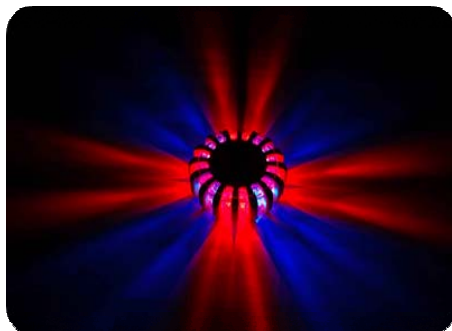

Is available in Infrared (IR) that is invisible to the unaided eye and only visible through night vision equipment.

It Floats and is water proof to a depth of 300' (attach to dive lines and buoys, designate areas/hazards or egress routes, night dives / cave dives)

Has 10 different Flash patterns including S.O.S.

It has no "right way up" it is the same whichever side it lands on.

It uses Lithium batteries with a 10 year shelf life and that withstand extreme temperatures without leaking, PowerFlare lights are replacing light sticks in earthquake and hurricane kits for Emergency Response Teams (ERT, CERT).

*Available in Red/Blue or Red/Amber combinations, or single colours of Red, Blue, Amber, Green, Orange, White or Infrared with a choice of outer shell of Yellow, Orange or Olive Drab as pictured above.*

**Whilst the Powerflare is slightly dearer than the Eflare, it cannot be broken, it's Brighter and the savings are quickly realized due to minimal battery changes. The Powerflare is far cheaper than the Turboflare SOS model.**

The Powerflare is available in rechargeable or Non-rechargeable models. Pictured right is the handy 6-Pack Rechargeable System in carry case and cigarette lighter plug.
